Siemens PLM Software 技術技巧及新聞

歡迎流覽《Siemens PLM Software 技術技巧及新聞》,希望它能成為 Siemens PLM Software 技術支援團隊將 Siemens PLM Software 最新產品更新、技術技巧及新聞傳遞給用戶的一種途徑

Date: 2104/08/01

Teamcenter Tips

1. <u>如何為兩層 IIOP 通信指定埠號</u>

問題

如何為兩層 IIOP 通信指定埠號,該埠在每次登陸請求時都會發生變化。該文章舉例說明如何為 IIOP 通信定義特定埠區間

方法

使用下面的步驟定義特定的埠區間: 我們可以定義 ImR 用來啟動 tcserver 的特定埠區間。 進入 tc_root\iiopservers 資料夾,在編輯器中打開 Tc_Server1.bat 文件。 修改下面的行:

%TC_ROOT%\bin\tcserver.exe -ORBInitRef ImpIRepoService=corbaloc:iiop:localhost:1572/ImpIRepoService id=TcServer1 useImR -ORBUseIMR 1

增加下面的行:

-ORBEndpoint iiop://1.2@localhost:3303/portspan=5 -ORBDottedDecimalAddresses 1

最終的結果如下:

%TC_ROOT%\bin\tcserver.exe -ORBInitRef ImplRepoService=corbaloc:iiop:localhost:1572/ImplRepoService id=TcServer1 useImR -ORBUseIMR 1 -ORBEndpoint iiop://1.2@localhost:3303/portspan=1 -ORBDottedDecimalAddresses 1

portspan 定義了用於 IIOP 的埠區間。

該設置可以用於存在防火牆,並且使用者需要為特定進程排除埠的情況。

Tecnomatix Tips

2014-8-1

2. <u>普通用戶無法登陸, 而 administrator 用戶組中的用戶可以登陸 PD/PS</u>

症狀

普通用戶無法登陸,而 administrator 用戶組中的用戶可以登陸 PD/PS

解決方法

請在 eMServer 和用戶端做如下設置,問題就可以解決.

eMServer

Control Panel - Administrative Tools - Component Services (Alternative: Start - Run: "dcomcnfg")

-> Console Root - Component Services - Computers - My Computer - Properties - Default Properties: Enable Distributed COM on this computer

-> Console Root - Component Services - Computers - My Computer - Properties - COM Security - Edit Limits/Edit Defaults (all): Add "Everyone" with full access

-> Console Root - Component Services - Computers - My Computer - Stop MS DTC -> / Start MS DTC

-> Console Root - Component Services - Computers - My Computer - COM+ Applications

-> eM-Server - Properties - Advanced: uncheck "Disable changes"

-> eM-Server - Properties - Identity: "This user" - Enter a (domain) user with local administration permissions

-> Console Root - Component Services - Computers - My Computer - DCOM Config

-> eMSAgent - Properties - Location - Run application on this computer

-> eMSAgent - Properties - Security - Edit (3x): Add "Everyone" with full access

-> eMSAgent - Properties - Identity: "This user" - Enter a (domain) user with local administration permissions

CLIENT

-> Console Root - Component Services - Computers - My Computer - Properties

--> COM Security - 2x Edit Limits, Edit Defaults - Add Everyone - All permissions for all users

-> Console Root - Component Services - Computers - My Computer - DCOM Config

-> eMSAgent - Properties - Location - Run application on the following computer "<eMServer>"

-> eMSAgent - Properties - Security - 3x Customize - Edit - Add Everyone - All permissions for all users

-> eMSAgent - Properties - Identity: "This user" - Enter a (domain) user with local administration permissions

-> eMServer - Properties - Location - Run application on the following computer "<eMServer>"

-> eMServer - Properties - Security - 3x Customize - Edit - Add Everyone - All permissions for all unsers

-> eMServer - Properties - Identity: "This user" - Enter a (domain) user with local administration permissions

(eMSAgent 和 eMServer 依賴於安裝的版本. 有些版本只有一個 DCOM 服務.) (運行服務的使用者需要是同一個使用者, 包括使用同樣的密碼, 在伺服器和用戶端上。) 檢查是否用戶在 Distributed COM users 組中(Computer Management -> Local Users and Groups -> Distributed COM users)

檢查一下防火牆的設置,檢查是否 Tecnomatix 應用程式 (Tune.exe) 和 eMPlanner.exe 被添加到防火牆的例外中去了。

License Tips

3. 如何確定 FLEX 使用的埠沒有被佔用?

訪問 IANA (International Assigned Numbers Authority) 註冊中心,以確定服務名稱及傳輸協定埠號註冊資訊。

http://www.iana.org/assignments/service-names-port-numbers/service-names-port-numbers.xhtml

這樣可以確認對應產品所使用的埠號. SIEMENS/PLM 佔用了埠 28000,目前適用於大多數 SIEMENS/PLM 的產品 下面是在 IANA 上顯示的埠 28000 註冊資訊

				OCINICOS			
	nxlmd	28000	tcp	NX License Manager	[Anthony_Greatorex]	[Anthony_Greatorex]	2004-11
	nxlmd	28000	udp	NX License Manager	[Anthony_Greatorex]	[Anthony_Greatorex]	2004-11
